

aura-1

Text-to-Speech • Deepgram

@cf/deepgram/aura-1

Aura is a context-aware text-to-speech (TTS) model that applies natural pacing, expressiveness, and fillers based on the context of the provided text. The quality of your text input directly impacts the naturalness of the audio output.

Model Info

Batch	Yes
Partner	Yes
Real-time	Yes

Model Info

Unit Pricing	\$0.015 per 1k characters

Usage

✓ Worker

TypeScript

```
export default {
  async fetch(request, env, ctx):
    Promise<Response> {
      const resp = await
env.AI.run("@cf/deepgram/aura-1", {
      "text": "Hello World!"
    }, {
      returnRawResponse: true
    });

      return resp;
    },
} satisfies ExportedHandler<Env>;
```

▼ curl

```
curl --request POST --url  
'https://api.cloudflare.com/client/v4/accounts/  
1' --header 'Authorization: Bearer {TOKEN}'  
application/json' --data '{  
  "text": "Hello world!"  
}'
```

Parameters

* indicates a required field

Input

- speaker **string** default angus

Speaker used to produce the audio.

- encoding **string**

Encoding of the output audio.

- **container** **string**

Container specifies the file format wrapper for the output audio. The available options depend on the encoding type..

- **text** **string** required

The text content to be converted to speech

- **sample_rate** **number**

Sample Rate specifies the sample rate for the output audio. Based on the encoding, different sample rates are supported. For some encodings, the sample rate is not configurable

- **bit_rate** **number**

The bitrate of the audio in bits per second. Choose from predefined ranges or specific values based on the encoding type.

Output

The binding returns a `ReadableStream` with the image in JPEG or PNG format (check the model's output schema).

API Schemas

The following schemas are based on JSON Schema

Input

Output

```
{  
  "type": "object",  
  "properties": {  
    "speaker": {  
      "type": "string",  
      "enum": [  
        "angus",
