Text Generation • Meta

@cf/meta/llama-guard-3-8b

Llama Guard 3 is a Llama-3.1-8B pretrained model, fine-tuned for content safety classification. Similar to previous versions, it can be used to classify content in both LLM inputs (prompt classification) and in LLM responses (response classification). It acts as an LLM – it generates text in its output that indicates whether a given prompt or response is safe or unsafe, and if unsafe, it also lists the content categories violated.

Model

Info

LoRA	Yes
------	-----

Model

Info

Unit	\$0.48 per M input tokens, \$0.03 per
Pricing	M output tokens

Playground

Try out this model with Workers AI LLM Playground. It does not require any setup or authentication and an instant way to preview and test a model directly in the browser.

Usage

› Worker

› Python

> curl

Parameters

* indicates a required field

Input

- **messages** **array** required

An array of message objects representing the conversation history.

- **items** **object**

- **role** required

The role of the message sender must alternate between 'user' and 'assistant'.

- **content** **string** required

The content of the message as a string.

- **max_tokens** **integer** default 256

The maximum number of tokens to generate in the response.

- `temperature` **number** default 0.6 min 0 max 5

Controls the randomness of the output; higher values produce more random results.

- `response_format` **object**

Dictate the output format of the generated response.

- `type` **string**

Set to `json_object` to process and output generated text as JSON.

Output

- `response` **one of**

- `0` **string**

The generated text response from the model.

- `1` **object**

The json response parsed from the generated text response from the model.

- **safe** **boolean**

Whether the conversation is safe or not.

- **categories** **array**

A list of what hazard categories predicted for the conversation, if the conversation is deemed unsafe.

- **items** **string**

Hazard category classname, from S1 to S14.

- ▶ **usage** **object**

Usage statistics for the inference request

- **prompt_tokens** **number** 0

Total number of tokens in input

- **completion_tokens** **number** 0

Total number of tokens in output

- **total_tokens** **number** 0

Total number of input and output tokens

API Schemas

The following schemas are based on JSON Schema

Input

Output

```
{
