Usage

✓ Workers - TypeScript

TypeScript

```
export interface Env {  
  AI: Ai;  
}  
  
export default {  
  async fetch(request, env):  
    Promise<Response> {  
  
    const response = await env.AI.run(  
      "@cf/meta/m2m100-1.2b",  
      {  
        text: "I'll have an order of the  
moule frites",  
        source_lang: "english", // defaults  
to english  
        target_lang: "french",  
      }  
    );  
  
    return new  
Response(JSON.stringify(response));  
  },  
} satisfies ExportedHandler<Env>;
```

▼ Python

Python

```
import requests

API_BASE_URL =
"https://api.cloudflare.com/client/v4/accounts/
headers = {"Authorization": "Bearer {API_TOKEN}"}

def run(model, input):
    response = requests.post(f"{API_BASE_URL}/{model}",
headers=headers, json=input)
    return response.json()

output = run('@cf/meta/m2m100-1.2b', {
    "text": "I'll have an order of the moule fri
    "source_lang": "english",
    "target_lang": "french"
})

print(output)
```

▼ curl

```
curl
https://api.cloudflare.com/client/v4/accounts/
1.2b \
-X POST \
-H "Authorization: Bearer $CLOUDFLARE_API_
-d '{ "text": "Ill have an order of the mo
"target_lang": "french" }'
```

Parameters

* indicates a required field

Input

- **0 object**
 - text **string** required min 1
The text to be translated
 - source_lang **string** default en

The language code of the source text (e.g., 'en' for English). Defaults to 'en' if not specified

- `target_lang` **string** required

The language code to translate the text into (e.g., 'es' for Spanish)

- ▶ **1 object**

- `requests` **array** required

Batch of the embeddings requests to run using `async-queue`

- `items` **object**

- `text` **string** required min 1

The text to be translated

- `source_lang` **string** default en

The language code of the source text (e.g., 'en' for English). Defaults to 'en' if not specified

- `target_lang` **string** required

The language code to translate the text into (e.g., 'es' for Spanish)

Output

- ▶ 0 **object**
 - translated_text **string**
The translated text in the target language
- ▶ 1 **object**
 - request_id **string**
The async request id that can be used to obtain the results.

API Schemas

The following schemas are based on JSON Schema

Input

Output

```
{  
  "type": "object",  
  "oneOf": [  
    {  
      "properties": {  
        "text": {  
          "type": "string",  
          "minLength": 1,  
          "description": "The text  
to be translated"  
        },  
        "source_lang": {  
          "type": "string",  
          "default": "en",  
          "description": "The  
language code of the source text (e.g., 'en'  
for English). Defaults to 'en' if not  
specified"  
        },  
        "target_lang": {  
          "type": "string",  
          "description": "The  
language code to translate the text into  
(e.g., 'es' for Spanish)"
```

```
        }
      },
      "required": [
        "text",
        "target_lang"
      ]
    },
    {
