

Getting started

Cloudflare R2 Storage allows developers to store large amounts of unstructured data without the costly egress bandwidth fees associated with typical cloud storage services.

1. Install and authenticate Wrangler

Note

Before you create your first bucket, you must purchase R2 from the Cloudflare dashboard.

1. [Install Wrangler](#) within your project using npm and Node.js or Yarn.

npm

yarn

pnpm

```
pnpm add -D wrangler@latest
```

2. [Authenticate Wrangler](#) to enable deployments to Cloudflare. When Wrangler automatically opens your browser to display Cloudflare's consent screen, select **Allow** to send the API Token to Wrangler.

```
wrangler login
```

2. Create a bucket

To create a new R2 bucket from the Cloudflare dashboard:

1. In the Cloudflare dashboard, go to the **R2 object storage** page.

Go to **Overview** [↗](#)

2. Select **Create bucket**.
3. Enter a name for the bucket and select **Create bucket**.

3. Upload your first object

1. From the **R2** page in the dashboard, locate and select your bucket.

2. Select **Upload**.

3. Choose to either drag and drop your file into the upload area or **select from computer**.

You will receive a confirmation message after a successful upload.

Bucket access options

Cloudflare provides multiple ways for developers to access their R2 buckets:

- [R2 Workers Binding API](#)
- [S3 API compatibility](#)
- [Public buckets](#)
