

R2 SQL

Note

R2 SQL is in **open beta**, and any developer with an [R2 subscription](#) can start using it.

Currently, outside of standard R2 storage and operations, you will not be billed for your use of R2 SQL. We will update [the pricing page](#) and provide at least 30 days notice before enabling billing.

Query Apache Iceberg tables managed by R2 Data Catalog using SQL.

R2 SQL is Cloudflare's serverless, distributed, analytics query engine for querying [Apache Iceberg](#) tables

stored in [R2 Data Catalog](#). R2 SQL is designed to efficiently query large amounts of data by automatically utilizing file pruning, Cloudflare's distributed compute, and R2 object storage.

```
> npx wrangler r2 sql query "3373912de3f520231718"
"SELECT * FROM default.transactions LIMIT 10"
```

 wrangler 4.38.0
